

## AST-08U ASME Air Keg

The new Puma 8 gal. air tank is a perfect addition to job sites. With its 3-in-1 multi-function capability, it can be a hand carry tank for remote use, an auxiliary tank (w/ mounting holes on foot) to use with existing air compressors and vessels for increased storage capacity of compress air, or be a buffer/ reserve tank added between compressors and point of use to prevent air pressure drops over an extended distance from air compressors.

The unit is designed and constructed according to ASME guidelines and is certified with ASME. A complete set of fittings and accessories is factory pre-installed and the unit can be used straight out of the box. There is still one unused port left for further expansion even with all enclosed fittings and accessories installed on.

An automatic shut-off valve on the inlet allows it to be disconnected while tank is charged with compress air at any time without need to manually close any valves, or release air out of itself, which guarantees the convenience and safety.

The unit is shipped with :

- (4) 1/4" Female quick couplers with 3/8" NPT
- (1) 1/4" Male quick coupler (located on automatic shut-off inlet valve)
- (1) ASME Safety valve
- (1) Pressure Gauge
- (1) Automatic shut-off Inlet valve
- (1) Drain valve
- (1) Plug (located on expansion port)
